

The facts about bowel cancer

Bowel cancer is the UK's second biggest cancer killer, but it shouldn't be.

Bowel cancer is treatable and curable, especially if diagnosed early.

Nearly everyone diagnosed at the earliest stage will survive bowel cancer, but this drops significantly as the disease develops.

Symptoms to look out for

Bleeding from your bottom and/or blood in your poo

A change in bowel habit lasting three weeks or more

Extreme tiredness for no obvious reason

A pain or lump in your tummy

Unexplained weight loss

Most people with these symptoms don't have bowel cancer. But if you have one or more of these, or if things just don't feel right, go and see your doctor.

Northern Ireland Bowel Cancer Screening Programme

Bowel cancer screening could save your life.

Screening can detect tiny amounts of blood in poo, which can't normally be seen.

If you are 60–74 you will receive a screening test in the post every two years.

For more information call the bowel screening helpline for Northern Ireland on **0800 015 2514**
